

ASTRAL PROJECTION

TANTRAYA SUPPLEMENTARY INFO SHEET

Card 1: Foundational Skills & Astral Sight

Daily Focus: Cultivating physical immobility and expanding sensory plasticity to shift from internal imagination into objective non-physical perception.

THE ABSOLUTE RULE OF STILLNESS

PHYSICAL STILLNESS UPON AWAKENING

Physical immobility upon waking is the single most critical skill for indirect methods. Executing any physical movement, twitch, or opening of the physical eyes instantly resets the neurological window and collapses the accessible Phase boundary.

ASTRAL SIGHT DEVELOPMENT PROTOCOL

- **Step 1: Focus on an Object** Look intensely at a simple nearby physical object, a clock, book, or candle. Note every minute detail of its texture, geometry, contour, and shifting color values.
- **Step 2: Close Your Eyes and "See"** Close your eyelids and attempt to perceive the exact same object through the darkness. Do not simply daydream or imagine it; intend your eyelids to function as completely transparent filters.
- **Step 3: Expand to the Entire Room** Extend the focus outward. Keep your eyelids closed and map the entire spatial grid of the room, furniture layout, wall bounds, and ambient light tracks, as if your eyes were open.
- **Step 4: The Hand Movement Test** Hold your subtle hands directly in front of your closed face and move them slowly. Track the onset of a luminescent, glowing, or shadowy outline tracking the motor movement, this is the initial signature of waking astral sight.
- **Step 5: The Clear Transference** Maintain relaxed, non-straining focus. Suddenly, the simulated imagery will transition into hyper-stable, crisp perception as the room snaps into diamond clarity.

Card 2: The Indirect Method & Plan of Action

Daily Focus: Leveraging natural hypnagogic and REM cycles to catch the transition zone between sleep and waking states.

SIMPLE PHASE TECH: INDIRECT PROTOCOL

- **1. Initial Sleep Window:** Go to sleep and allow a baseline, uninterrupted sleep cycle of exactly 6 hours to ensure physical rest and prime downstream neurochemistry.
- **2. Interrupted Intermission:** Arise fully from bed for 30 to 50 minutes. Read technical manuals, anchor your intentional mindset, review your operational path, and keep your body moving lightly.
- **3. Re-entry Intention:** Return to bed and lay down with a single-pointed command: *"On the next natural awakening, I will notice it instantly and remain perfectly still"*.
- **4. Clean Catch:** The moment you drift back and awaken naturally, freeze all physical tissue. Immediately attempt a primary separation method. If it hesitates, launch into rapid technique cycling.

PRE-ESTABLISHED PLAN OF ACTION

PREVENTION OF EARLY COLLAPSE

Projections end prematurely when the conscious mind lacks an explicit script. Disorientation and overwhelming environmental novelty will dissolve the double back into the physical vehicle unless anchored by a strict protocol.

WAYPOINT

STRICT OPERATIONAL DIRECTIVE

Waypoint 1

TARGET IMAGE

Select a specific, highly detailed, and meaningful image, statue, or talismanic object in your home. Commit to visiting and stabilizing directly in front of it the split-second separation is achieved.

Waypoint 2

WAYPOINT

STRICT OPERATIONAL DIRECTIVE

THE FRONT DOOR

Move directly to the front door of your current home. Touching this highly familiar landmark grounds your spatial orientation and builds unshakeable confidence while out-of-body.

Waypoint 3

THE CORE GOAL

Execute your customized ultimate objective: remote pathworking, interaction with guides, charging sigils, or drawing higher archetypal knowledge.

Card 3: Separation Methods & Deepening

Daily Focus: Alternating fluidly between mechanical separation triggers and immediate sensory saturation to prolong the out-of-body state.

CORE SEPARATION METHODS

Attempt these with absolute commitment the moment a Phase state is detected:

- **Standing Up:** Simply stand up straight from your lying position without engaging any physical muscles. Intend the subtle body to slide vertically out of the flesh vehicle.
- **Rolling Out:** Roll your double sideways as if rolling off the physical edge of your mattress. This motion targets vestibular kinetic tracking directly.
- **Rolling Out Method Note:** The rolling motion systematically engages vestibular sensations and can be highly effective for those who find standing up too abstract.
- **Levitating:** Project an upward, gravity-defying trajectory. Allow yourself to float effortlessly straight toward the ceiling, bypassing all physical mass.
- **Astral Hands:** Focus exclusively on your subtle hands. Move them, flex them, feel them become dense and real, then use them to grab an imaginary ledge and pull your entire form clean out.

THE TECHNIQUE CYCLING SEQUENCE

If a method fails, cycle through these sensory levers for 3 to 5 seconds each without stopping to judge progress:

TECHNIQUE	KINETIC VESTIBULAR MECHANICS
Rotation	Consciously feel your subtle form spinning rapidly like a top on its central vertical axis. This strongly forces vestibular detachment.
Climbing a Rope	

TECHNIQUE	KINETIC VESTIBULAR MECHANICS
	Vividly grip a thick, coarse rope suspended above you. Pull yourself upward hand over hand, prioritizing the raw tactile friction of the fibers over visual imagery.
Rubbing Hands	Rub your astral hands together with intense friction. Focus on the heat, textures, and sound to lock consciousness into the double and stop a collapse.
Rising / Falling	Surrender to an intense sensation of falling freely through space or shooting upward at terminal velocity.

DEEPENING & STABILIZATION KEYS

- **Sensory Saturation Walking:** Walk slowly and deliberately toward your target image. Force every sense to engage: feel the exact weight transfer of your footsteps, touch surfaces, taste the air, and observe textures. The more real it feels, the longer the state endures.
- **Alchemical Swimming:** If the environment starts to blur, plunge into water and swim. The full-body multi-channel sensory drag of water provides instant stabilization.

Card 4: Advanced Direct Frameworks

Daily Focus: Executing un-fragmented conscious transitions directly from full waking awareness into the astral plane.

THE NEAR DEATH EXPERIENCE (NDE) EMULATION METHOD

- **1. Deep Organic Relaxation:** Settle into an unmoving posture. Quiet all physical feedback loop responses, systematically neutralizing muscular and nervous inputs until you approach the stillness of the death transition.
- **2. Conscious Death-Emulation:** Intentionally enter a state of total existential surrender. Voluntarily drop all identification with the physical anatomy and sever ties to the material environment. This is an unshakeable, profound mental release.
- **3. Constellation & Ascent:** Feel your dispersed life-force gather itself from the extremities of your physical frame. Feel it condense along the central vertical axis of your body and begin an unhurried, steady ascent upward.
- **4. The Third Eye Conflux:** Direct the entire conflux of gathered energy up into the Ajna center behind the forehead. Experience it as an intense surge of upward-moving force localized right at the third eye.
- **5. Tunnel Projection:** Project clean out of the third eye and see a brilliant, self-luminous tunnel of light open before you. Travel through the tunnel with complete focus and emerge safely into the vibrant Phase landscape.

THE TRANS-LOCATION VANTAGE POINT METHOD

- **1. Select an Exact Coordinate:** Place your body in a resting position. Select a highly specific, single coordinate in your room completely outside your body. The high top corner of the ceiling or a point directly above your face looking down functions best.
- **2. Force Crystalline Perception:** Attempt to actually see, not abstractly imagine, the room entirely from that selected coordinate. Inspect the ceiling joins, light angles, and furniture angles from that specific spot. Accept no loose tracking; demand absolute visual realism.

- **3. Map the Interface:** Turn your newly relocated perspective back down toward the bed. Look at your physical body resting quietly below, and trace the glowing, white-silver umbilical cord connecting your current viewpoint directly back to the physical form. This double-awareness snaps the shift into place for full separation.

Card 5: The Tactile Energy Body Sequence

***Daily Focus:** Fully activating, circulating, and clearing the etheric double using the Robert Bruce tactile mechanics.*

THE TERTIARY MODALITIES PROTOCOL

- **Brushing:** Execute swift, light, sweeping strokes of focused attention along the surface skin lines to clear and prime the outermost boundary layers.
- **Stirring / Swirling:** Initiate dense, tight circular loops right inside major joints, chakras, and energetic hubs to break up stubborn stagnation.
- **Sponging:** Draw deep awareness through your tissues like a giant sponge, pulling vital force inward and upward to fill the etheric framework from within.

THE FULL-BODY PREPARATORY CLEARING

Treat each target zone as a three-dimensional geometric volume, not a flat surface:

- **The Feet:** Brush your big toes front to back, then sponge them. Repeat across all other toes. Brush the entire underside of the foot, stir and swirl the soles, and execute deep sponging through the ankles.
- **The Legs:** Brush up and down along the front, back, inner, and outer lines of the limbs. Sponge deep inside the entire marrow space (5–7 seconds per sweep), and swirl the back of the knees and hip junctions.
- **Hands & Arms:** Brush and sponge individual fingers. Swirl the palms and wrist joints. Sponge the entire arm from the fingertips straight up into the armpits, swirling the inner elbows and shoulders.
- **Spine & Torso:** Brush the spine continuously up and down. Deeply sponge your entire spine, then expand to brush and sponge the front, back, and sides of the whole torso.
- **Head & Chakras:** Brush and sponge the neck, sides of the skull, and face. Conclude by swirling the core centers: Crown, Throat, Heart, Solar Plexus, Navel, and Base of Spine into fully active, rotating vortices.
